

eRequest

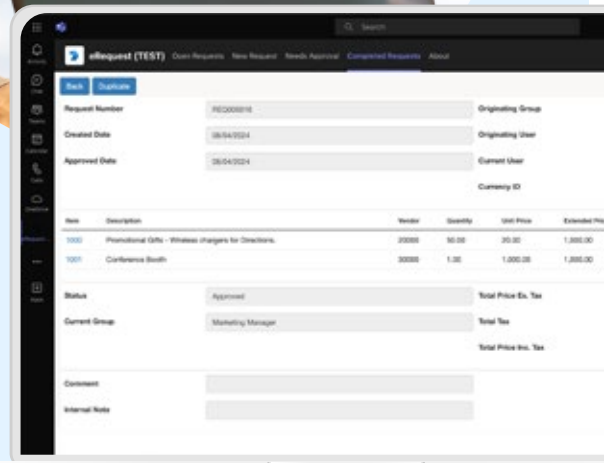

A Microsoft Teams requisition system for complete spending control within Microsoft Dynamics 365 Business Central.

Take control of business spending

eRequest allows you to leverage the expense and procurement control benefits of traditional purchasing procedures without incurring the associated financial overhead or administrative burden.

Set up your requisition and expense pages based on the data your users need to enter. The high level of configuration allows eRequest to be used in a variety of ways to suit your business requirements.

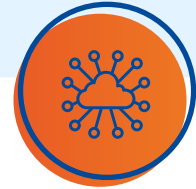

Cost Savings

eRequests streamlines the invoice approval process by eliminating manual steps, reducing errors, and speeding up approvals.

Internal Compliance and Improved Accuracy

Ensure policy compliance with predefined approval rules and audit trails, while real-time tracking offers visibility into requisition status, enhancing transparency and accountability.

Centralized Data Management

A Unified Repository that serves as a centralized platform for all purchasing information, including requests, approvals, and purchase orders, with seamless integration into Business Central.

Enhanced Decision-Making

Data-Driven Insights that provide valuable insights into spending patterns and procurement efficiency, aiding in better decision-making.

Enhanced Efficiency

Quick approvals with automated workflows that route requests to the right stakeholders, eliminating bottlenecks, and scalability to handle growing data volumes and complex approval structures.

eRequest

A user friendly Microsoft Teams App that boosts efficiency and frees up valuable time

Features*:

- > User-configurable data entry forms with versatile form designer
- > Role, user and item-based authorization
- > Multi-level approval hierarchies
